

Coffee Shop Sales Data Analysis Requirements

Comprehensive Project Overview

MySQL

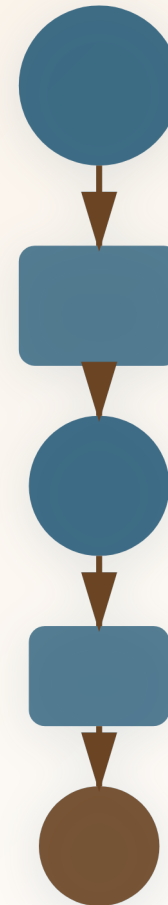

PowerBI

MySQL Data Processing Workflow

PART 1

- 1 Raw data file preparation
- 2 Create database
- 3 Import file
- 4 Clean imported file
- 5 Change data types
- 6 Execute SQL queries for business requirements
- 7 Prepare SQL documentation
- 8 Data analysis & insights

Problem Statement – Part 1

1 Total Sales Analysis

- ✓ Calculate total sales for each month
- ✓ Determine month-over-month increase or decrease
- ✓ Calculate difference from previous month

2 Total Orders Analysis

- ✓ Calculate total number of orders for each month
- ✓ Determine month-over-month increase or decrease
- ✓ Calculate difference from previous month

3 Total Quantity Sold Analysis

- ✓ Calculate total quantity sold for each month
- ✓ Determine month-over-month increase or decrease
- ✓ Calculate difference from previous month

Problem Statement - Part 2

Data Visualization Requirements

Calendar-Based Heat Map

Implement a dynamic heat map that adjusts based on selected month, displaying daily sales with color intensity variations. Include tooltips showing detailed metrics (sales, orders, quantity) on hover.

Weekday vs Weekend Analysis

Perform segmented analysis comparing sales data between weekdays and weekends to evaluate performance differences across different time periods.

Store Location Sales Visualization

Visualize sales data by store location, highlighting monthly growth or decline trends to identify top-performing and underperforming locations.

Problem Statement Part 3

Advanced Analytics Requirements

Average Line Charts

Add average line in charts representing daily average sales for trend analysis

Product Category Analysis

Analyze sales performance by product category to identify top performers

Top 10 Products

Identify and display top 10 best-selling products with detailed metrics

Sales Pattern Heat Map

Utilize heat map to visualize sales patterns by day and hour

Key Deliverables

Coffee Shop Sales Data Analysis Project

MySQL Database Setup

Complete data processing workflow from raw data to cleaned database with proper data types

Monthly KPI Tracking

Sales, Orders, and Quantity metrics with MoM comparisons and trend analysis

Interactive Visualizations

Heat maps, calendar views, weekday/weekend analysis, and store location comparisons

Product Performance

Category analysis, top 10 products identification, and hourly sales patterns

SQL Documentation

Complete SQL queries and documentation for all business requirements
